Enterprise Mobility-as-a-Service

Embracing enterprise mobility is a **critical requirement for today's businesses**. By enabling workers to securely access corporate information at any time, from anywhere, your organisation can benefit from increased employee productivity and responsiveness, and accelerated decision-making.

However, the complexity of enterprise mobility, the rapid pace of technology change and budget, and resource constraints often make it difficult for IT departments to support the ever-evolving needs of the mobile workforce. And while the majority of organisations are embracing bring your own device initiatives, many struggle to effectively manage mobile devices and expenses.

Other challenges include:

- increasing IT cost and complexity
- corporate governance, risk, and security concerns
- cost transparency and allocation
- services outages
- uncontrolled data usage
- device diversity, which creates integration issues

As a result, there's a growing interest on the part of businesses in leveraging cloud-based enterprise mobility management solutions: the cost, flexibility, and economy of scale benefits offered by the cloud are very appealing.

'By enabling workers to securely access corporate information at any time, from anywhere, **your organisation can benefit from increased employee productivity** and **responsiveness**, and **accelerated decision-making**.'

Dimension Data's Enterprise Mobility-as-a-Service

Enterprise Mobility-as-a-Service is a complete enterprise mobility management solution that covers devices, expenses, and integration. Our approach is policy-based and device-independent and is supported by our global Managed Cloud Platform.

The service enables you to monitor and manage a wide range of mobile devices, remove the complexity of mobility deployments, and gain visibility and control of your mobile fleet.

How is the service delivered?

- Enterprise Mobility-as-a-Service is a global offering and forms part of Dimension Data's portfolio of public, private, and hybrid cloud services, which are delivered through a consumption-based model.

- The service is complemented by the extensive knowledge and experience of our professional services and consulting teams.

- This is a standalone service that's available to you regardless of whether you're already making use of Dimension Data's cloud services.

Why Dimension Data?

- Unlike other providers that offer only point solutions, our approach covers consulting, professional services, and systems integration.

- We adopt a consulting-led approach to enterprise mobility, with the output being a mobility roadmap that enables you to embark on your mobility journey with confidence.

- We have:

  – extensive systems integration skills to help mitigate the complexity associated with mobility projects

  – successfully completed numerous mobility consulting and professional services engagements, which gives us deep insight into the typical challenges that may arise during such deployments

  – extensive telecom expense and mobile expense management expertise to help you manage the costs associated with enterprise mobility

  – a powerful, highly available Managed Cloud Platform, to ensure, consistent global delivery

  – extensive IT outsourcing experience, which enables us to apply our skills and insights regarding operational management of IT systems and solutions, including mobility deployments

  – a global footprint, and standardised pricing structures and support processes

'Enterprise Mobility-as-a-Service is a **complete enterprise mobility management solution** that covers devices, expenses, and integration. Our approach is policy-based and device-independent and is supported by our global Managed Cloud Platform.'
