

Data Centre Solutions

Organisations worldwide are placing ever-greater demands on their data centres to provide business services faster, more efficiently and with greater security. This pressure is exacerbated by constantly escalating computing and storage requirements, not to mention the need to maintain service levels.

Comprehensively addressing the needs of the business calls for a next generation data centre that provides:

- Aggregated resource pools to provide rapid provisioning of services to end-users
- Consumption-based models to streamline data centre resources and reduce total cost of ownership
- Self-provisioning and automation for greater business agility and improved service delivery

- Fewer devices that require setup, management, power, cooling, and cabling
- Secure computing environments that can be moved to a data centre anywhere to improve disaster recovery and service availability
- Greater energy and cost efficiency

Dimension Data can help.

The business issues we address

Our Data Centre Solutions business helps clients on their journey towards a more efficient and agile data centre, enabling greater automation and responsiveness in the delivery of business services.

Dimension Data's Data Centre Solutions business works with you to:

- Reduce operational cost and complexity through the virtualisation and consolidation data centre infrastructure
- Reduce risk and improve compliance through automated, secure solutions that enable business continuity
- Improve productivity and time to market using solutions that enable automation and self-service to support business services
- Create a more carbon-friendly infrastructure by pinpointing where efficiencies can be extracted through virtualisation, consolidation, power and cooling solutions

Our focus areas

Using the experience gained over 25 years, combined with strong technology partnerships and expert people, we craft technology solutions and services that

improve the efficiency, performance and agility of your data centre. We offer end-to-end services across the lifecycle of a data centre in the following areas:

our services

Desktop & Server Virtualisation	We deliver secure server, desktop and storage virtualisation solutions that enable business agility, increase the availability of resources and applications and support your journey to cloud computing
Storage & Data Management	We provide services that optimise the storage, retrieval, backup and recovery of data to ensure business continuity, compliance and the rapid delivery of information to your business
Data Centre Networking	We provide the platform that enables you to harness the power of virtualisation and improve the delivery of services to the business with greater agility and higher levels of resilience
Data Centre Facilities	We help simplify the architecture and management of the data centre in order to deliver greater efficiency in an environmentally and economically sustainable manner

Our Clients

Dimension Data provides data centre solutions and services to leading companies around the world. Our clients include

- Alexander Forbes
- BMW
- European Fund Administration
- Fluxys
- Lafarge
- National University of Singapore
- New York Police Department
- NewBridge Bank
- Saudi Stock Exchange
- Thailand Stock Exchange
- TNT Express
- Volvo Cars

Credentials and Awards

Dimension Data has repeatedly been recognised for its expertise and client-focused solutions by vendors including VMware, Cisco, EMC and Microsoft.

“We firmly believe our partners are the cornerstone to our success and critical for the continued **growth of virtualisation technology** in the region and around the world. We’re extremely proud to work with organisations such as Dimension Data, whose **commitment** to VMware and **investment** in their virtualisation practice has seen them make a significant impact in the industry.”

Manish Sharma, Senior Director, VMware.
