

Dimension Data Security Solutions at a Glance

The classic security defence model revolving around defending the 'trusted' internal network from the 'enemy' outside won't work for today's corporate network. Its vulnerability extends to any number of sources – friendly (mobile and remote workers, business partners, clients) and malicious (viruses, hackers, corporate espionage and sabotage).

Dimension Data understands all of this. We use our in-depth knowledge of the converged network and all its vulnerabilities, opportunities and challenges, to plan, build, support and manage a Secure Infrastructure for our clients - an infrastructure that is secure and adaptable enough to support your business applications, core network and information, today, tomorrow and beyond.

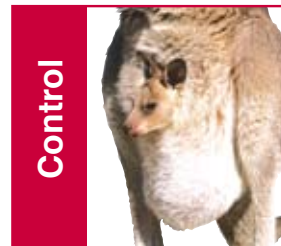

Our track record in the security arena speaks for itself:

- ▲ More than 5,000 security clients in 36 countries around the world
- ▲ Over 10,000 product implementations successfully completed
- ▲ In excess of 3,000 consulting engagements worldwide
- ▲ Strong relationships with leading security vendors, including Microsoft, Cisco, Check Point, RSA, Blue Coat, McAfee and Nokia.

We employ some of the most respected security experts in the field, bringing a wealth of experience to deal with the security issues businesses face today. Our expertise ranges from technical engineers and security consultants, to BSI Lead Auditors. Certifications include CISSP, CCSA, CCSE, RSA and SANS GIAC.

This expertise, combined with a 25-year networking history and knowledge in areas such as server and storage technologies, contact centres and operating environments make Dimension Data the clear choice for Secure Infrastructure solutions.

A Secure Infrastructure is an architecture that through technology, people and processes enables you to create self-defending and adaptable environments – be that Wide Area Networks(WANs), Wireless, Campus or other IT infrastructures. The appropriate level of security enables you to leverage your IT infrastructures to meet business objectives like mobility, compliance and business continuity by protecting against, detecting,controlling and responding to security threats.

Some of our most recent and significant awards and achievements for security solutions include:

- ▲ **Blue Coat** Global Systems Integrator of the Year 2006
- ▲ **Cisco** Security Partner of the Year 2006
UK, Germany, Belgium, Luxembourg, India
- ▲ **McAfee** Outstanding Network Security Partner 2006
Asia Pacific
- ▲ **RSA** Best Solutions Partner 2007
Australia
