Scalability

Video – A new way of collaboration

High definition video has transformed the way many organisations meet and collaborate. Meetings can be organised between locations, without the need for travel, decisions can be made faster, knowledge is scaled, work life balance is enhanced – and it pays for itself. The challenge until now has been to leverage these benefits between organisations, without the need to invest in expensive hardware and without losing the high definition experience.

The **one.govt** video gateway service solves this challenge and enables Government agencies to connect to each other and collaborate using video.

This service enables agencies to utilise the **one.govt** network to act as an inter-connect point for inter-agency video conferencing. This service is product agnostic and enables Tandberg, Polycom, Cisco and other H323 and SIP compatible video conferencing systems to connect.

Connect with other agencies

To support the increasing collaboration between government agencies, the **one.govt** video gateway service enables subscribers to connect directly with other subscribing agencies, at any time, securely and with a simple dial-plan.

Run multi-party conferences

Inherent within the service is the ability to run multi-party conferences, either within your own organisation, with other agencies or external parties. A 'virtual meeting room' allows all users to connect to a central 'meet me' point, simply and securely.

Connect to anyone

Utilising secure 'virtual meeting rooms', the **one.govt** video gateway allows you to connect with other organisations virtually anywhere in the world. Simply provide the address of the virtual meeting room, and other organisations can connect via the inclusive Internet gateway service or via the optional ISDN gateway service for users of legacy technology.

Proposed Features

Secure: Connect securely

When connecting outside your organisation, network security is paramount. The inherent security within the **one.govt** network is supported by the deployment of session border controllers and gatekeepers at all points of interconnection. This is further enhanced by all external parties joining via a 'meet me' point, ensuring connection only happens when you want it to.

Simple: Flat rate pricing

With **one.govt** video gateway services there are no usage charges, just a simple monthly subscription charge. And, because this is an all of government facility, should you temporarily need extra resources you can leverage 'burst' capacity within the system.

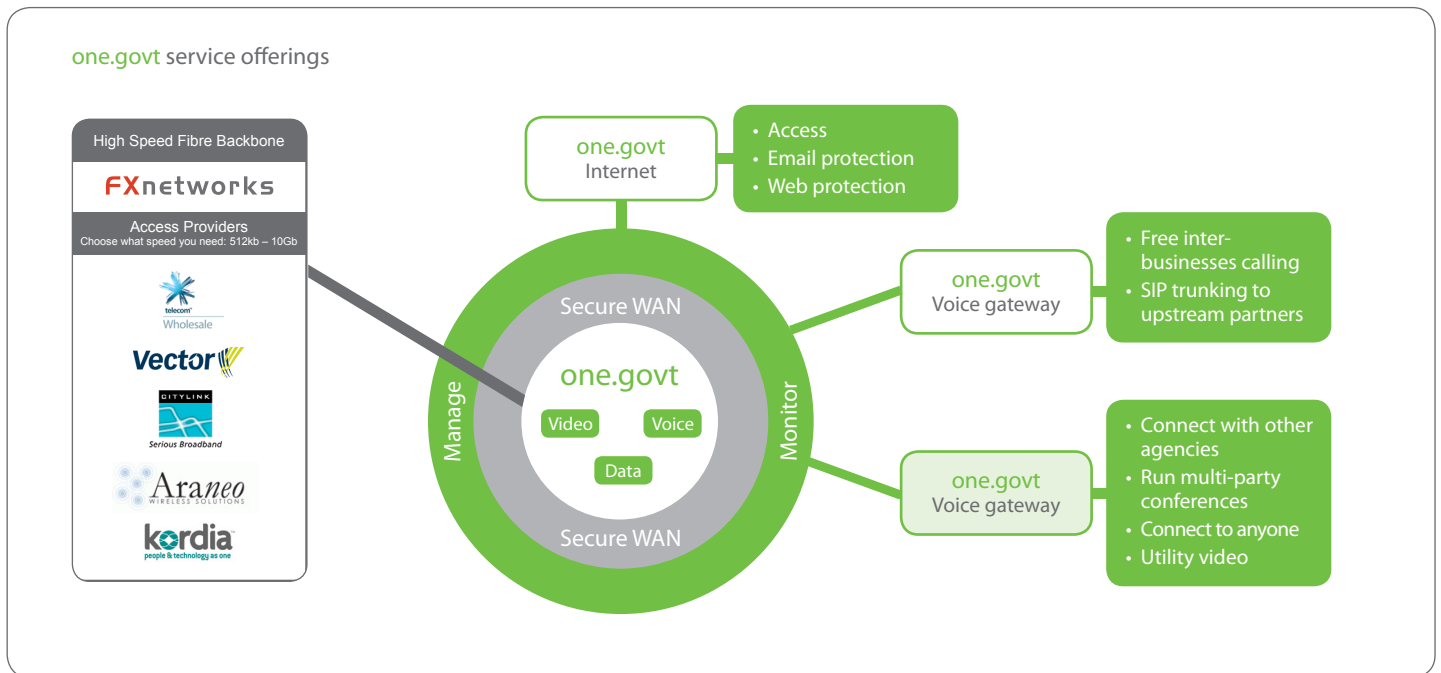

Open: Compatible with leading systems

The **one.govt** video gateway service is able to support end-points from major leading vendors such as Cisco, Polycom and other H323 and SIP based systems. This means you do not need to replace your existing video conferencing technology to benefit from the **one.govt** video gateway service.

Utility Video Service

Are you expanding or upgrading your existing systems, or considering implementing Video Conferencing for the first time? Talk to us about our utility video service, a new way to deploy video conferencing. There is no up-front outlay on hardware, software or support, with Dimension Data fees being charged on a per-month subscription basis. Combining this with the **one.govt** video gateway, we deliver a reliable, secure, end to end high performance video conferencing solution, with little-to-no effort from the client.

Removing the last two great barriers to video conferencing adoption – up-front expense and complex back end infrastructure, Dimension Data finally delivers the promise of totally reliable, broadcast quality video communication for all.

About **one.govt**

one.govt stands for Open Network Environment for Government. It is an innovative suite of telecommunications services tailor made by Dimension Data New Zealand to meet the needs of government agencies. The suite offers low cost, high speed WAN and internet services with a number of advantages over traditional offerings. **one.govt** provides a flexible platform for the adoption of new communications technology, including voice and video conferencing, making it easy for your organisation to move quickly and keep up to date. With support and advice from our sales team you can cherry pick the services that best suit your business environment and your budget.
