With the power afforded by the cloud, it can:

- Enhance your business performance.
- Foster growth.
- Avoid silos.
- Reduce costs.
- Scale applications.
- Ensure security.
- Embrace automation.
- Enable innovation.
- Reduce infrastructure investment.
- Meet demand.
- Seamlessly interface with always-on software applications.
- Easily scale.

Unfortunately, many organisations face obstacles that prevent them from fully realising its potential. You need to navigate challenges such as:

- A lack of, or difficulty finding, necessary talented/skilled workers.
- Difficulties in managing data security.
- Challenges associated with network performance or availability.
- Complexity of managing cost across multiple cloud environments.
- Inability to migrate legacy IT and business applications.
- Overcoming organisational silos/outdated work practices.

Journey to the right cloud with Dimension Data

Will help you maximise the benefits of the cloud through a hybrid approach that combines the best of on-premise and cloud. You will receive on-site support and advice.

We believe in the hybrid cloud approach because of the freedom it provides your organisation to execute a business strategy determined by your application and infrastructure strategy.

With Cloud from Dimension Data, you can rapidly adopt a hybrid model and define an optimal path for your transformation. That includes an unprecedented level of security. Our cloud offering is intrinsically secure because we build security into every layer.

Our process follows a journey and it will cover consultation, migration, operation and optimisation.

We'll assess your readiness and enable your journey towards achieving your business outcomes.

We'll provide a detailed migration plan of your workloads and seamlessly deliver an empowering solution in the right cloud environment.

We'll afford your organisation the freedom that comes with full maintenance, proactive management and reliable support.

And continually deliver enhancements for greater performance and improved cost-effectiveness.

Our hybrid cloud solutions are:

- Specialist Infrastructure for Applications
- Specialist Infrastructure for Data Protection
- Specialist Infrastructure for DevOps Practice Establishment
- Hybrid Cloud Infrastructure Services
- Software-Defined Data Centre (SDDC)
- InterCloud Cloud Migration Services
- InterCloud Network Services
- InterCloud Security Services
- InterCloud Compliance Services
- InterCloud Support Services
- InterCloud Cloud Management and Monitoring

Ensure that your hyperscaler, private cloud, shared platform, hosted or on-premise, needs are covered by a better cloud solution powered by leading global technology players. Our partners include AWS, Azure, Cisco, Dell, HPE, and VMware.

We’ll help you maximise the benefits of the cloud through a blended approach because we understand that not everything is as simple as one or the other, or one-size-fits-all. And no two clouds are alike.

With the power afforded by the cloud, it can:

- Enhance your business performance.
- Foster growth.
- Avoid silos.
- Reduce costs.
- Scale applications.
