

PhaseCONVERT for SAP S/4HANA CLOUD

The Dimension Data PhaseCONVERT for SAP S/4HANA Cloud package offers a fast, safe and reliable way of converting your existing SAP ECC investment to the latest SAP S/4HANA Cloud solution, thereby allowing your organisation to benefit from an intelligent ERP.

The Challenges

All SAP customers anticipating a move to SAP S/4HANA, face the same challenges:

- Selecting the most suitable transition path (a new implementation vs a conversion vs selective data transformation).
- Minimizing risk and business disruption.
- Integrating current processes with the new SAP S/4HANA functionality.
- Promoting digital transformation and innovation.

The Solution

If a system conversion ('Brownfield') is the right transition path for your environment, then PhaseCONVERT for SAP S/4HANA Cloud package can assist your business by using our proven and predictable methodology to streamline your efforts.

Key Business Benefits

- Lower risk as your move project is based on a fast, safe, and proven methodology.
- Allows you to adopt SAP S/4HANA at your own pace.
- Minimises custom code in a scalable SAP landscape.
- Supports the adoption of the SAP S/4HANA processes.
- You have the option to request ongoing support via the Dimension Data Managed Services

How the Package Works:

01 Discovery Phase

Understand your As-Is environment in order to position your To-Be environment and explore the new business processes in SAP S/4HANA.

02 Trial Conversion

Convert a copy of your current production environment in a trial environment.

03 Full Conversion

Convert your landscape to SAP S/4HANA using our proven methodology.

04 Run and Transform

Operate and run your new SAP S/4HANA system - transform your business, adopt the new functionality and start the innovation journey.

“If you believe you can do anything, we’re here to help you do it”

- Dimension Data an NTT company

The Package Approach:

Consider the **Discovery Phase** as an ideal opportunity to set your strategy by understanding your As-Is landscape mapped to the To-Be state, inclusive of impacted functionality and mandatory changes. The outcome of the SAPS/4HANA Discover phase provides the appropriate tactical plan that can support the case for change that will be presented by the key decisionmakers.

The Trial Conversion is a recommended approach to establish a first pass conversion and unlock any potential issues. This phase provides necessary insight into the Full Conversion.

The Full Conversion will consider the outcomes of the Discovery Phase and Trial Conversion and deliver a full SAP S/4HANA conversion of your current SAP ECC environment. The emphasis is however on continuation of your business and will adopt a risk-averse approach.

Run and Transform is where the business can start to benefit from using a best of breed ERP, with the new process improvements making business transformation a reality.

The PhaseCONVERT for SAP S/4HANA CLOUD package typically takes anything between 5 and 12 months to deliver, with a starting price of ZAR6m.

Dimension Data has a proven track record in supporting Customers on their innovation journey, post the migration SAP S/4HANA. Considerations around Robotic Process Automation (RPA) and Internet of Things (IoT) we can bring innovative value to your business.

Why Dimension Data:
