

MANAGED SERVICES

# Consulting and Advisory Services

## A Results-oriented Framework for Expedited Cloud Transformation

Our professionals assist in planning and implementing digital transformation or cloud migration projects to help enterprises attain strategic goals and objectives while remaining competitive. **NTT's Consulting and Advisory Services will help accelerate your cloud transformation.**

### Key Features

#### Comprehensive Discovery

A technical deep dive and IT infrastructure discovery – from OS, to storage, to applications.

#### IT Modernization

Recommendations to modernize IT infrastructure for enhanced productivity, efficiency, and agility.

#### Comprehensive Infrastructure Insight

Business and IT analytics to understand system and application interdependencies for informed technology decisions.

#### Strategic Partnership

Strategic service relationship dedicated to exceeding technology and cloud transformation expectations.

### Consulting and Advisory Services: Discovery and Assessment Services

Consulting and Advisory Services enable you to leverage our professional resources, in-depth technical knowledge, and best-practice methodologies to add value to your IT transformation projects. Our design and delivery teams specialize in complex and multi-product IT integrations, and provide expedited guidance and implementations. Discovery is the first step in the migration or transformation process. Our Discovery Services help to design a strategy that meets your unique business and technology objectives.

Our services approach is interactive with in-person or Web conference consultant interviews. We use proprietary tools that perform detailed scenario analyses across multiple migration scenarios to build a comprehensive business case and technology migration strategy for your needs. sDiscover, our multi-site master inventory discovery assessment reduces transition risk by identifying application interdependencies.

### Key Benefits

- Consulting and Advisory expertise from a trusted multi-cloud advisor.
- Comprehensive cloud migration road map for optimized results and reduced costs.
- Best-in-class strategic partner that offers step-by-step deployment and implementation services for an optimized cloud platform.
- Expedited enterprise IT transformation with less risk, backed by an industry-leading SLA.

We offer three Discovery Assessments to support your IT transformation and planning:

- Merger & Acquisition Assessment** Provides clear visibility into technology footprints while engaged in an acquisition or merger. This assessment assists in identifying system interdependencies to critical systems, and aged infrastructure and alerts to potential risks. With this information in hand, NTT will provide recommendations and best practice guidance.
- Discovery and Migration Planning Assessment**  
 We provide a comprehensive view of your IT infrastructure and strategic goals to make recommendations addressing (private, hybrid, multi) cloud, best practices, compliance, and security. With the assessment findings NTT can identify opportunities for optimization such as an oversized footprint that can be reduced, thus improving performance and reducing costs. This assessment will also look at how you use the cloud today and provide future state goals and recommendations.
- Network Assessment**  
 An analysis of network assets and performance with recommendations to improve reliability, security and performance. NTT will analyze performance, traffic and bandwidth seeking opportunities for improvement and areas of potential risk. At the conclusion of this assessment a client receives a comprehensive inventory of their network assets and network topology diagrams.

## IT Transformation Services for Changing Business Requirements

NTT delivers IT Transformation services that enable businesses to respond to changing business demands. Regardless of the need, our teams are available to help ensure the success of migration, implementation, or IT projects. Our clients gain efficiencies by augmenting IT staff or by utilizing our Managed Cloud's performance and scalability.

With NTT, companies gain access to deep technical expertise and to innovative technologies that expedite business transformation. Our managed hosting environment not only enables IT teams to focus on strategic projects, it reduces the burden of required capital expenditures associated with IT upgrades.

When transforming IT or moving to the cloud, an experienced cloud migration partner is a must. Our teams work with enterprises to develop a comprehensive plan to meet cloud goals and outline a comprehensive strategy and architecture to get you there – whether it's Private, Hybrid, Public or Multi-cloud.

Merger & Acquisition Assessment	Discovery & Migration Planning Assessment	Network Assessment
<i>Clear Visibility</i>	<i>Visibility and Strategy</i>	<i>Better Optimization</i>
<b>Objective:</b> Inventory technology assets, identify system interdependencies, aged infrastructure and potential risks.	<b>Objective:</b> Review current state and provide digital transformation guidance for a best fit solution.	<b>Objective:</b> Evaluate performance and make architecture recommendations to improve reliability, security and performance.
<b>Output:</b> Executive Report to include hardware assets inventory, system interdependencies, architecture recommendations to better optimize and secure infrastructure.	<b>Output:</b> Executive Report to include hardware assets inventory, system interdependencies, best fit (private vs public) and best practices (security and compliance) recommendations.	<b>Output:</b> Executive Report to include network analysis, hardware assets inventory, network topology diagram(s) and architecture recommendations to better optimize and secure the network.
