DIMENSION DATA SECURES A MULTINATIONAL TECHNOLOGY SERVICES PROVIDER WITH NEXT-GEN CYBERSECURITY SOLUTIONS

Singapore, 17 April 2018 – [Dimension Data](#), a USD8 billion global technology integrator and managed services provider, today announced its long standing partnership with an Indian multinational IT Services provider. Dimension Data has been engaged with the organisation for over a decade and has been executing strategic projects around its IT landscape and cybersecurity.

The new engagement will see Dimension Data implementing next-generation cyber security solutions comprising integrated intrusion management systems that can detect attacks based on traffic behavioural analysis, threat signatures or anomalous activity.

The firm's current IT architecture was scaling up in terms of traffic and resources and it was looking at adopting transformative solutions for its infrastructure. Its security architecture also needed to be revamped to keep up with its technology transformation, as the existing security posture was unable to cater to the dynamic cybersecurity landscape. Dimension Data deployed gateway control across the company's nine locations in India, to effectively manage traffic flow and screen threats deeper and faster.

Additionally, a centralised policy management system was implemented to streamline the organisation's deployment, troubleshooting and management processes. The new system helps define standards that emphasise the values of the company and prevent compromises of important company data. Thus, ensuring better policy management for the firm as well as meeting its granular SLA with their clients. The solutions combine application awareness and deep packet inspection to give more control over applications while detecting and blocking malicious threats. Apart from establishing a frontline defence, the enterprise is also investing in threat intelligence and expanding its cyber response capabilities.

“The ever-growing cybersecurity landscape deals with constant new vulnerabilities. Our teams conducted architecture level workshops with the client and proposed vendor neutral solutions that would help them meet their business objectives. These discussions strengthen our services narrative and convinced the client that they can now focus on their core business as their cybersecurity services are provided by trained specialists in next-generation cybersecurity solutions,” said Murtaza Bhatia, National Business Manager Cyber Security, Dimension Data India.

About Dimension Data

Founded in 1983, Dimension Data is a USD 8 billion global leader in designing, optimising, and managing today’s evolving technology environments. This enables its clients to leverage data in a digital age, turn it into information, and extract insights.

Headquartered in Johannesburg, Dimension Data employs 28,000 people across 46 countries. The company brings together the world’s best technology provided by market leaders and niche innovators with the service support that clients need for their businesses – from consulting, technical, and support services to a fully-managed service.

In Asia Pacific, we operate in 35 offices across 13 countries. We help clients enable technology, operate their IT infrastructures and transform technology solutions that deliver value. It combines an expertise in digital infrastructure, cybersecurity, customer experience (CX), and digital workplace, with advanced skills in IT outsourcing, IT-as-a-Service, Systems integration services and training.

Dimension Data is a proud member of the NTT Group. Visit us at <http://www2.dimensiondata.com>
